

# GrabMaps Hackathon

April 24, 2026

OpenAI

65labs

Grab | GEO

# GrabMap Hackathon useful information

## Meals

- 🍴 Lunch: ~12pm
- 🍦 Snacks: ALL DAY!
- 🍽️ Dinner: ~5:30pm

## Space & Access

- 💻 Hacking at MPH Open Space (just outside!)
- 🚻 Toilets are outside too
- 🛂 Wear ID bands at all times

## 📶 WiFi Access

**Username:**  
Grab-BYOD

**Password:**  
7[N@a9f)

## Hackathon time

10 am to 5 pm

# Opening Speech - Sriram

# Portal Walk through

# Getting Started Quickly

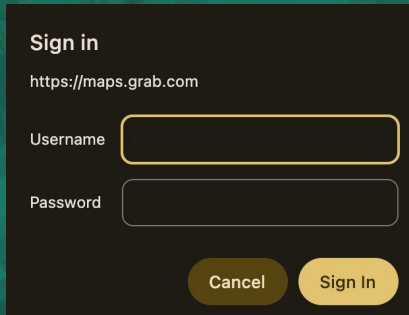

## 1. Sign Up

Register at [maps.grab.com/developer](https://maps.grab.com/developer) and set up your developer profile in seconds.

### CREDENTIALS

**Username:** GrabMapsDevelopers

**Password:** GrabMapsHackathonApr2026

Sign in

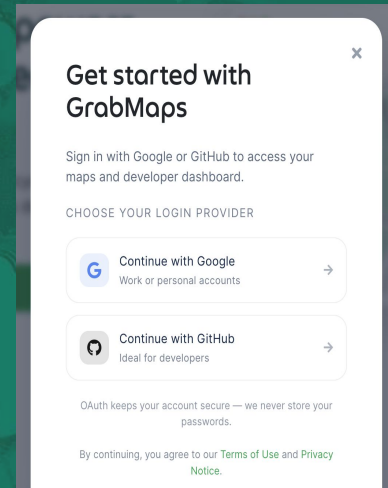

<https://maps.grab.com>

Username

Password

## 2. Login

Login with the email you signed up with on hackathon to get access to the website.

Get started with GrabMaps

Sign in with Google or GitHub to access your maps and developer dashboard.

CHOOSE YOUR LOGIN PROVIDER

 Continue with Google  
Work or personal accounts

 Continue with GitHub  
Ideal for developers

OAuth keeps your account secure — we never store your passwords.

By continuing, you agree to our [Terms of Use](#) and [Privacy Notice](#).

# Getting Started Quickly

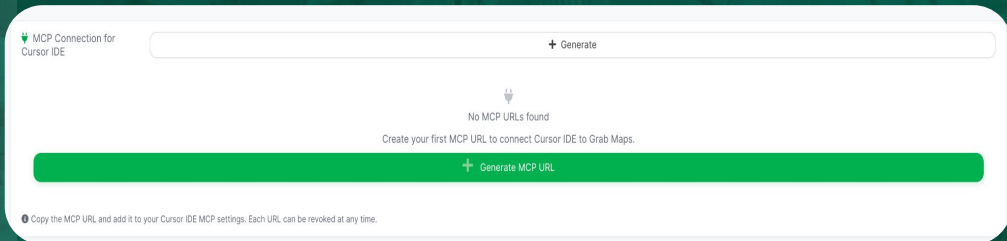

## 3. Generate Keys

Generate MCP and API keys, store and keep them aside for now.

### IMPORTANT NOTE

MCP and API keys are separate.

If you're facing errors, check that you are using the right set of keys.

MCP Connection for Cursor IDE

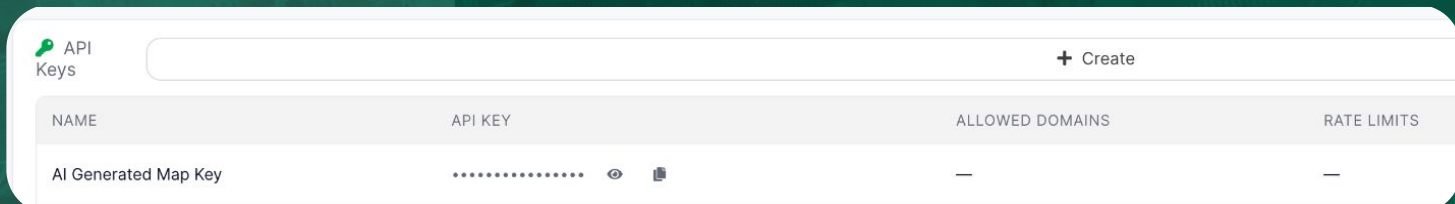

+ Generate

No MCP URLs found

Create your first MCP URL to connect Cursor IDE to Grab Maps.

+ Generate MCP URL

Copy the MCP URL and add it to your Cursor IDE MCP settings. Each URL can be revoked at any time.

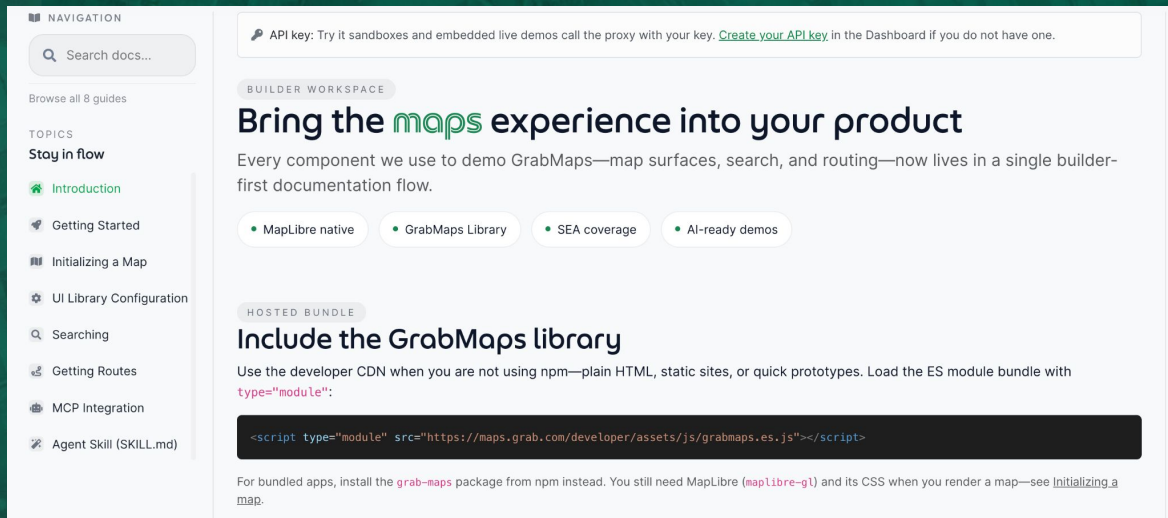

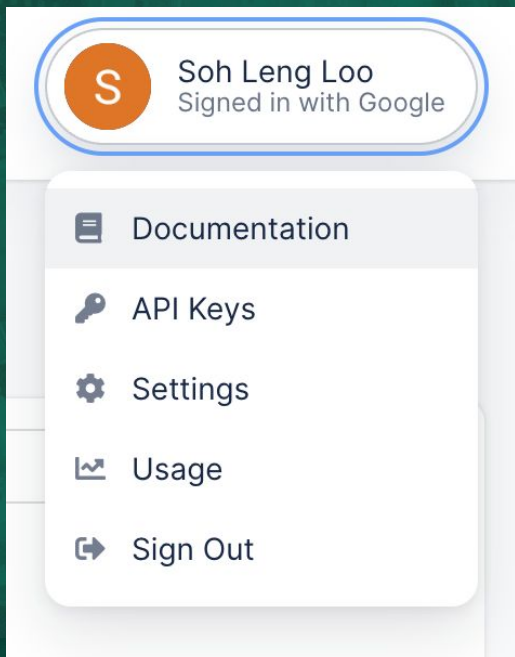

API Keys

+ Create

| NAME                 | API KEY                                                                                                                                                                       | ALLOWED DOMAINS | RATE LIMITS |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-------------|
| AI Generated Map Key | .....   | —               | —           |

# Getting Started Quickly

## 4. Tools available

# Getting Started Quickly

## 5. Implementation

Now that you have your credentials, it's time to put them to work.

### Action:

Use your generated MCP keys to authorize MCP and/or Agent skill requests.

 API key: Try it sandboxes and embedded live demos call the proxy with your key. [Create your API key](#) in the Dashboard if you do not have one.

## GrabMaps — library and API reference

Reference for the `grab-maps` JavaScript/TypeScript library (MapLibre-based), HTTP endpoints the gateway exposes for maps/places/routing (typically behind **Authorization: Bearer <API\_KEY>**), optional MCP tools, and how to load the map style for MapLibre.

\*Map style (default): use `GET {origin}/api/style.json` with **Authorization: Bearer <API\_KEY>**, parse JSON, and set MapLibre's `style` to that object (§2.8, §5). The GrabMaps library does this automatically when you set `baseUrl` + `apiKey` and omit a custom `style`. Do not\*\* rely on `?key=` query parameters on `/api/style.json`—use the Bearer header (or `transformRequest` if you must pass a style URL string).

Replace `https://maps.grab.com` with your API origin. API keys often look like `bm_...`. An optional anonymous staging `mono.json` URL exists for keyless prototypes only (§5.1); it does not use your API host or Bearer tokens.

### 1. Authentication

- Protected map and Places calls: **Authorization: Bearer <API\_KEY>**.
- Map style for MapLibre: `GET /api/style.json` on your API origin requires `Authorization: Bearer <API\_KEY>`. Fetch the JSON and pass it to MapLibre as `style` (§2.8). Same pattern as the hosted docs and demos.
- Public staging style (optional): `https://maptiles.stg-myteksi.com/v1/styles/mono.json` — load in MapLibre directly; no Bearer header and no `X-MTS-SSID` (§5.1 only).
- MCP (HTTP): **Authorization: Bearer YOUR\_API\_KEY** on the MCP transport if your deployment exposes MCP (section 4).

# PSA: Best Practices

## Recommended Implementation

To ensure a secure and reliable integration, we recommend calling Maps APIs via your backend (proxy) instead of directly from the frontend.

### Protect API Credentials

Keep keys hidden from client-side exposure.

### Avoid Browser Limits

Bypass CORS and other browser-related restrictions.

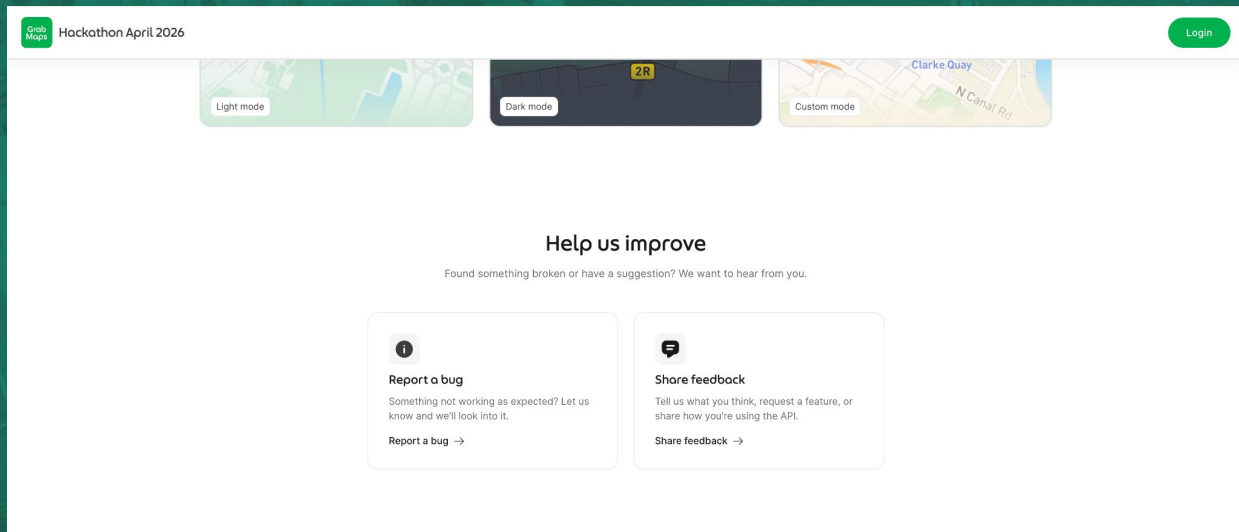

### Better Control

Manage usage, monitoring, and performance data.

# Bug reporting

## 6. Bug reporting

# Idea Inspirations

# What to build? Hackathon themes

## Themes

### Intelligent Mobility

Dynamic routing, ETA comparisons, and adaptive planners for city movement.

### Discover the City

Hyperlocal discovery, curated maps, and social sharing of favorite spots.

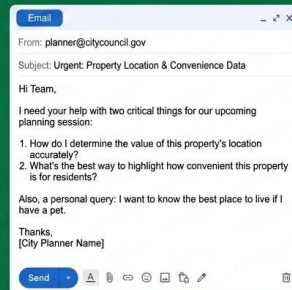

### Smarter Places

Richer POI data and live activity visualization for smarter businesses.

## Solve Personas problems

### The Careful City/Condo Planner

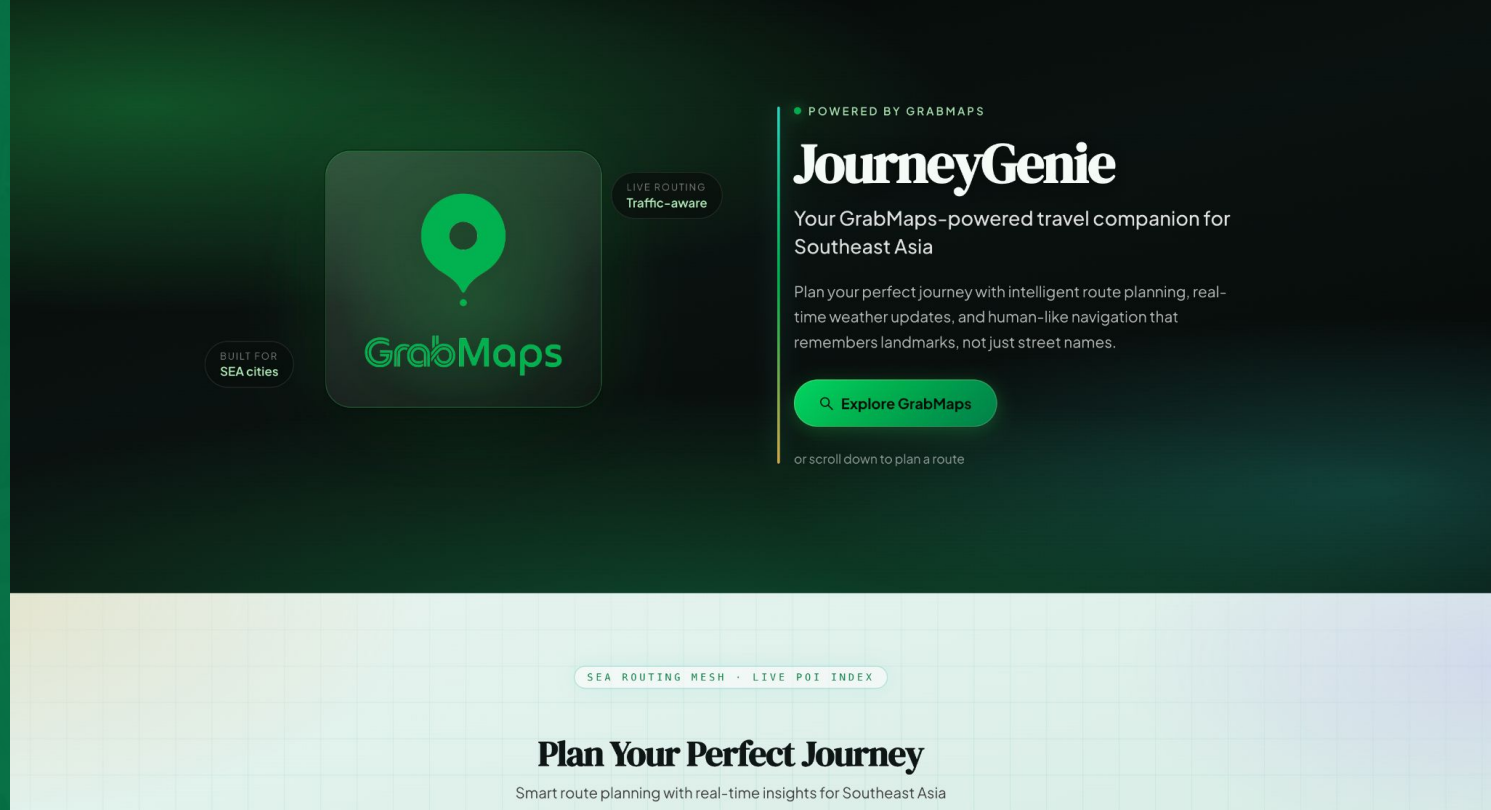

### The Metropolitan Marketer

### The Platform Player

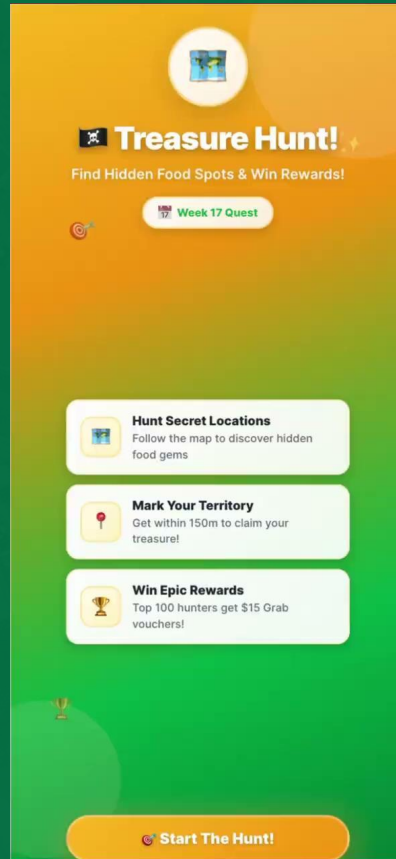

# Demo: JourneyGenie - Saikat

# Demo Grab&Seek - Soh Leng

**Free ChatGPT/Codex Pro**

## Criteria

## Description

**Technical Merit**

Quality of code, architecture, and implementation

**Polish**

Attention to detail, UX, and overall execution

**Execution**

How well you delivered on your vision

**Wow Factor**

How memorable and impressive your hack is
